

Blue1USA Introduces Non-insulated Mini-bulk Systems for DEF Market

Duluth, GA - August 24, 2012. DEF equipment manufacturer, Blue1USA, announced today a new line of Mini-bulk Storage and Dispensing Systems for use in warm weather states. These non-insulated systems are all engineered to the same high quality standards as the company's most popular and original insulated models and can be safely used to store and dispense DEF in most states within the continental U.S. All of the warm weather, non-insulated systems are available in the same models and sizes as the mini-bulk insulated systems and the smaller cabinets for storing DEF totes.

President and Managing Partner, Dave Polak states "We are pleased to respond to customers who have asked for a solution to store and dispense DEF in warm weather climates at a reasonable price. These non-insulated models include all of the same quality parts and components as our insulated systems, including UL and CSA electrical certification. In fact, if you were to set an insulated and non-insulated system side by side, you would not be able to distinguish the difference between the two. Both exteriors have the same aesthetically pleasing glossy white finish. This exciting new product reinforces our reputation as the DEF market leader providing quality products and long term value."

Blue1USA is a fully integrated manufacturer of DEF (Diesel Exhaust Fluid) storage and dispensing systems. The Company is headquartered in Duluth, Georgia, with manufacturing facilities in Little Rock, Arkansas. More information can be found at www.blue1usa.com.
